- Multitude of customized printing options
- Possibility of 3D printing
- Anti-allergenic product
- Limitless special effects due to backlit ceilings

#1 distributor in Canada

Having executed **more than 10 000 installations** so far, INF Concept is proud to be a member of one of the biggest distribution centers in Canada, which places us among the biggest network of certified stretched ceiling installers in Canada.

The superior quality of our products combined with the size of the network allows us to offer our clients **the best quality stretched ceilings at the most affordable price!**

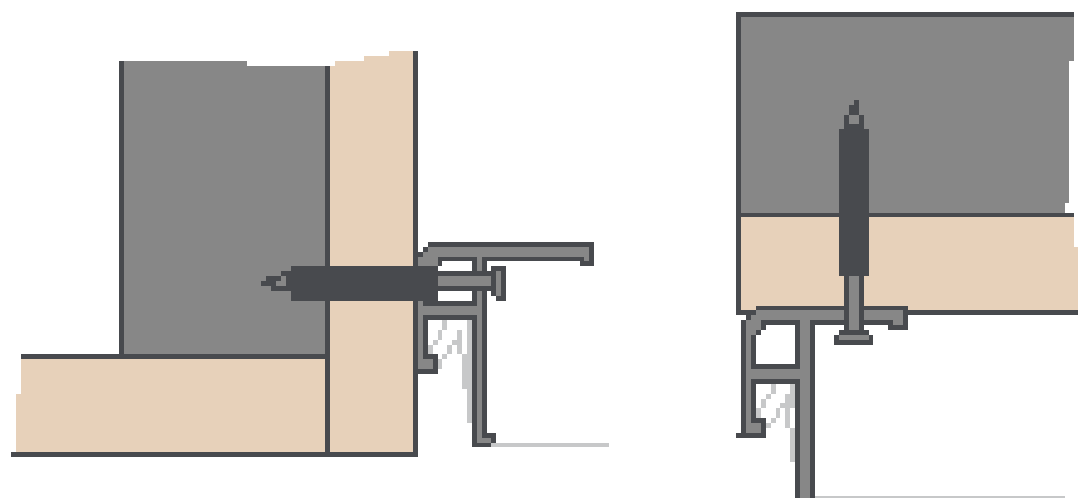

What is a stretched ceiling?

Stretched ceiling is comprised of 3 main components:

- the profiles
- the harpoon
- the PVC membrane

You must install profiles around the perimeter of the room to then be able to hang the harpoon which is welded onto the PVC membrane. The distance between the original ceiling and the PVC membrane after installation will be approximately an inch.

Installation process:

1. Measurements of the room are taken
2. Installation of profiles around the perimeter of the room
3. Preparation and installation of the adjustable system
4. Heating of the room with a heater to around 45°C to be able to stretch and manipulate the canvas
5. Hang the canvas to the profiles using “harpoon” that have been welded to the membrane
6. Once well installed the ceiling will be stretched thus creating a smooth and flawless surface

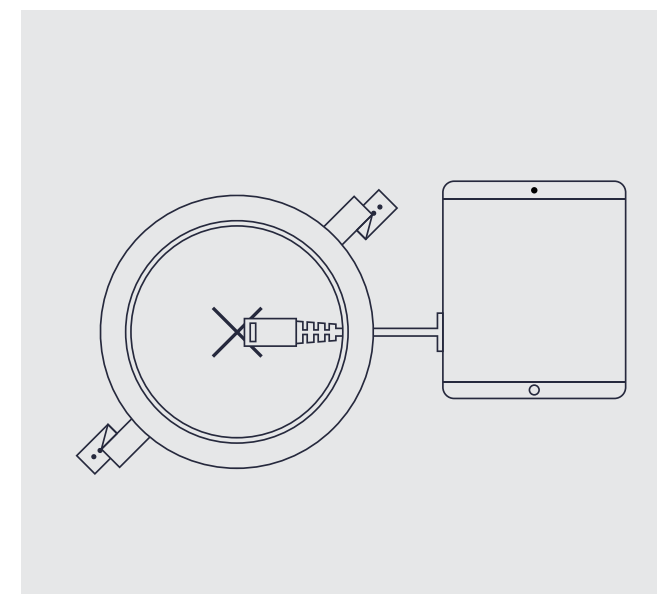

Membrane:

- Comes in more than 120 colors
- Comes in many textures: lacquered, mat, satin, translucent, printed, backlit, acoustic, and 3D
- Microperforated (acoustic)

Accessories and insertions:

- Wide variety of profile choices
- Recessed lighting possibilities
- Ventilation vents
- Sprinkler system
- Smoke detector
- Speakers
- Fiber optics
- LED lighting system

* For more information regarding the installation process, please consult INF Concept's technical manual.

Covering of furniture

Cleanliness and protection of the client’s space is important to us. Therefore, whenever we install on a concrete surface, we offer our clients the option of covering their furniture.

INF Concept’s quality teamwork and professionalism are the main reasons for its success.

Stretched ceiling is the quickest and most affordable way to cover a concrete or stucco finished ceiling.

INF LED Lighting

A unique and affordable solution to integrate LED lighting to a stretched ceiling. This LED lighting has a width of 30mm which allows for the creation of continuous reflections. Useful for perimeter or in-ceiling lighting, this LED lighting system brings the result of your project at a different level in term of quality and look.

Varying degrees Kelvin
are available such as:
2700k (Warm white)
3000k (Warm white)
4000k (Cool white)

Available with a black or
semi-transparent diffuser.

It is possible to use LED RGB modules to give you the option
of changing the colors with your remote.

Custom frames and suspensions with an acoustic solution:

We offer custom frames made with stretched fabrics. Whether suspended or mounted on the ceiling or wall, these frames can be tailored to your needs and preferences. In addition, we offer the option to integrate acoustic properties, improving sound absorption in your spaces while adding a unique aesthetic touch. These solutions are especially useful in open commercial or residential areas. They make it possible to define zones—such as above a kitchen island or within a lobby—creating a visual and acoustic separation while maintaining overall design harmony.

INFin-LUX Custom Lighting

We offer a range of ready-to-use interior luminaires, carefully crafted to reflect the timeless beauty of modern design. With their clean shapes, natural contours and refined styles, these luminaires are ideal for illuminating large spaces while meeting the most complex lighting requirements. Their acoustic properties also enhance the sound comfort of the environment.

For an even more unique effect, it is possible to incorporate vegetation, such as moss, into some of our light fixtures, creating a fusion between nature and light. These fixtures can be used individually or in groups to create creative compositions, providing both functional lighting and a decorative touch. They adapt beautifully to modern, Scandinavian, high-tech, or minimalist interiors.

A unique concept

We offer lighting fixtures with a unique, modular design, perfect for adapting to various interior styles. These innovative lighting solutions allow you to create diverse lighting compositions by combining panels of different sizes or heights to achieve concave or convex effects. In addition, we offer the option of designing luminous rings, a feature that elegantly defines lighting zones.

For more information, consult the INFin-Lux lighting catalog available on the website at www.infconcept.com or by contacting a member of our team at info@infconcept.com
